

Supplementary Table

Supplementary Table 1. Description for sub-phases of stance phase

Variable (English)	Variable (Korean)	Description
Initial contact phase	초기 디딤기	A duration from the time that the first sensor appears in the footfall to the time that the first sensor appears in the middle one-third of the foot.
Late contact phase	후기 디딤기	A duration from the time that the first sensor appears in the middle one-third of the foot to the time at which 78% of all sensors associated with the foot have been activated.
Foot flat phase	평평기	A duration from the time at which 78% of all sensors associated with the foot have been activated to the time at which the last sensor deactivates in the proximal one-third of the foot.
Initial propulsive phase	초기 디딤기	A duration from the time at which the last sensor deactivates in the proximal one-third of the foot to the time at which the last sensor deactivates in the middle one-third of the foot.
Late propulsive phase	후기 디딤기	A duration from the time at which the last sensor deactivates in the middle one-third of the foot to the time that the last sensor deactivates in the footfall.
